STORE IT

Know where every lab item is before you step into the storeroom.

The Problem

Science students waste time hunting through several storerooms for misplaced or used-up supplies, and supervisors learn about shortages too late.

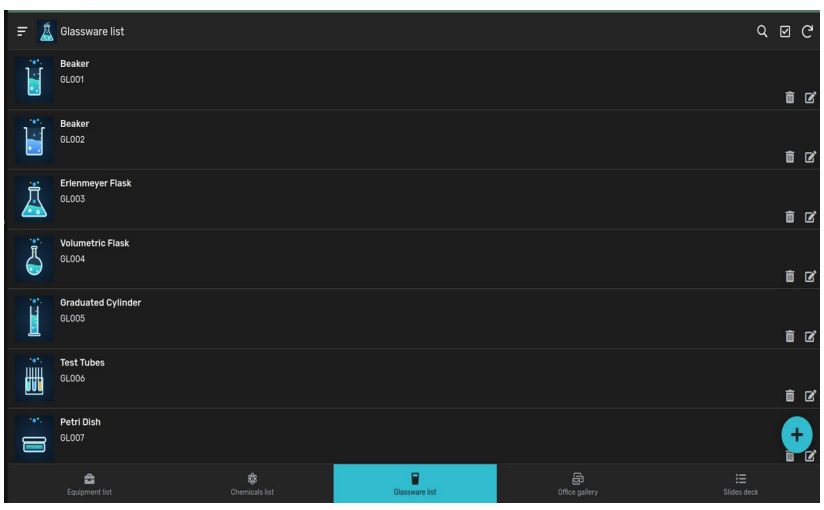

The Solution

Store It links every shelf and bottle to a mobile scanning app. Find items instantly, log usage in seconds, and get low-stock alerts before supplies run out.

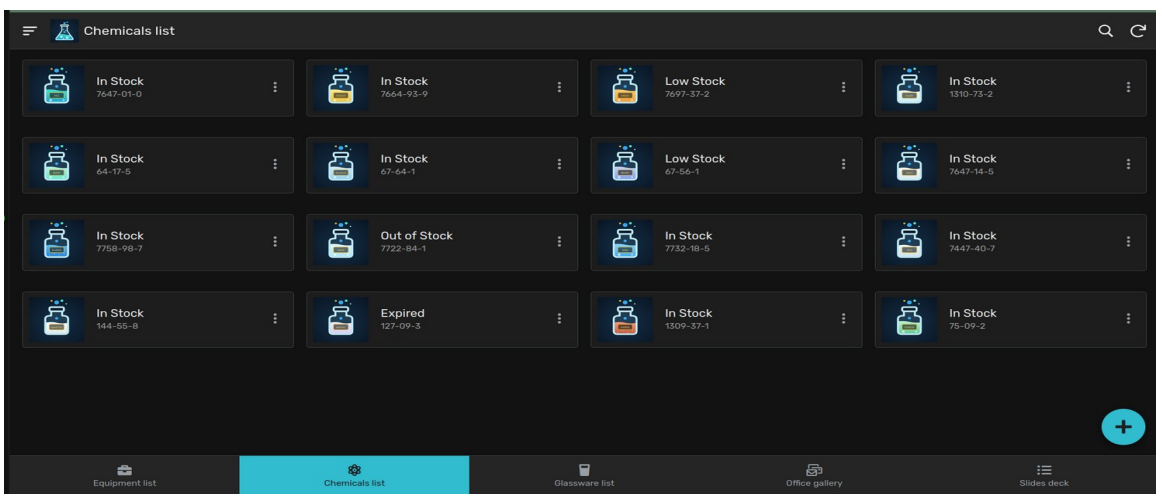

How It Works

Open a tab or search to find an item, check its stock status, and use the + and pencil icons to add or update records so everyone sees what's low or expired.

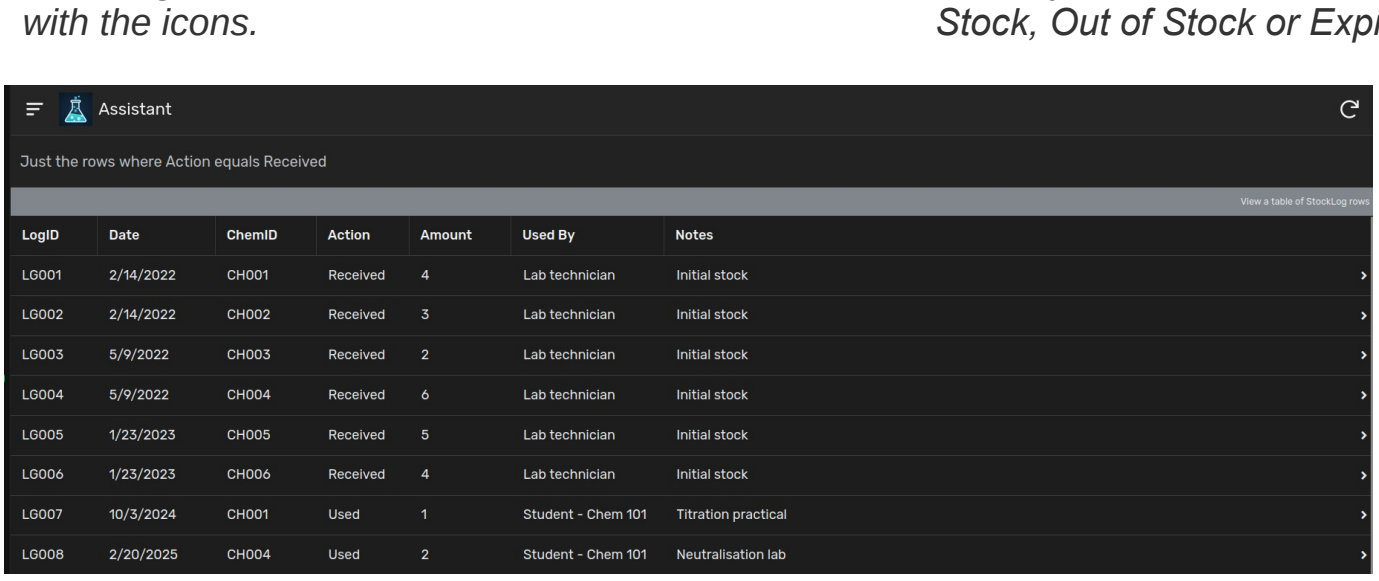

Key Features

1. *Add glassware with +, and edit or delete it with the icons.*

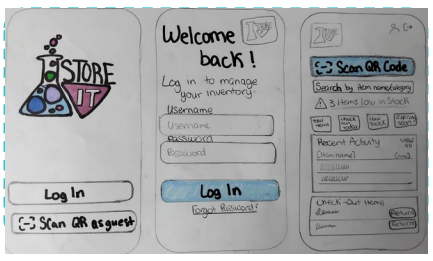

2. *Every chemical shows its stock status: In Stock, Low Stock, Out of Stock or Expired.*

LogID	Date	ChemID	Action	Amount	Used By	Notes
LG001	2/14/2022	CH001	Received	4	Lab technician	Initial stock
LG002	2/14/2022	CH002	Received	3	Lab technician	Initial stock
LG003	5/9/2022	CH003	Received	2	Lab technician	Initial stock
LG004	5/9/2022	CH004	Received	6	Lab technician	Initial stock
LG005	1/23/2023	CH005	Received	5	Lab technician	Initial stock
LG006	1/23/2023	CH006	Received	4	Lab technician	Initial stock
LG007	10/3/2024	CH001	Used	1	Student - Chem 101	Titration practical
LG008	2/20/2025	CH004	Used	2	Student - Chem 101	Neutralisation lab

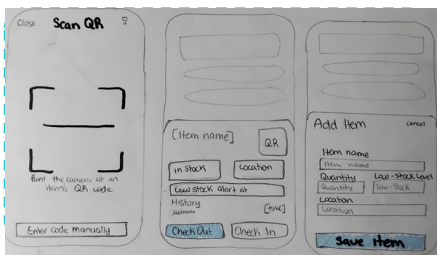

3. *Every chemical received or used is logged with date, amount, who, and why.*
