

SCIENCE LAB INVENTORY SYSTEM

Cristina Gonzales, Wasani Castillo, Amber Gill

VALUE PROPOSITION

Product name: Store It

Value proposition: Know where every lab item is before you step into the storeroom.

Problem/solution overview:
Science students waste time hunting through multiple storerooms for misplaced or used-up supplies, and supervisors find out about shortages too late. Store It links every shelf and bottle to a mobile scanning app, so anyone can find items instantly, log usage in seconds, and get low-stock alerts before supplies run out.

TASKS

Simple

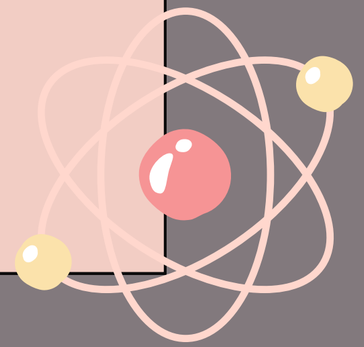

Find a specific chemical without searching through multiple rooms.

Moderate

Keep the shared inventory accurate after taking, moving, or using up an item.

Complex

Notice that a supply is running low and restock it before anyone runs out.

STORYBOARD

- Shot 1: Amber is frantically searching storeroom cabinets with paper binders. Wasani enters, opens LabPulse, types the item name, and walks straight to Shelf 2. Wasani and Amber share and expression stating “It was that easy?”

- Shot 2: Wasani takes the chemical to the lab to finish his experiment. After he is done, he notices the bottle is empty. He scans the qr code and updates the chemical’s information.

- shot 3: Cristina is looking for the same chemical. She walks over to the storeroom but notices the bottle is missing. She checks Store It and realizes that it is in another room and that is empty.

- shot 4: When wasani updated the information, the lab technician recived a notification stating that a chemical ran out. She quickly orders a new batch.

THANK YOU VERY MUCH!
